EDUCATION

- **Bachelor of Information Technology and communication Engineering** 2021-2026
Suez Canal University, Ismailia, Egypt

COURSES AND CERTIFICATIONS

- **Advanced Front-End Development (JSB) – Elevate Tech (6 months)**
Full-Stack Web Development Bootcamp (12 months) – Route Academy

PERSONAL PROJECTS

- **Arabic Medical Chatbot Web Application (Graduation Project)**
A full-stack medical assistant platform enabling users to get symptom-based guidance through an AI-powered chat interface.
 - Built the **full-stack** application using **Next.js**, handling **both frontend and backend** within a unified framework
 - Implemented **secure authentication** using Better Auth for **session management** and user **access control**
 - Developed backend logic using **Next.js server routes** with MongoDB as the database
 - **Technology Used:** Next.js, MongoDB, Better Auth, Tailwind CSS, REST APIs
- **Rose – E-Commerce Platform with Admin Dashboard**
built during the Elevate JSB program
 - Implemented **role-based access control** for the admin dashboard to restrict unauthorized access
 - Built **reusable, complex table components** used across multiple dashboard sections
 - Optimized **page load performance** through efficient data rendering and minimizing unnecessary re-fetches
 - Implemented secure authentication using **NextAuth.js** for session management and user **access control**

EXPERIENCE

- **Wep Developer Intern** 16 July 2024- 10 Nov 2024
Delta Square Hybrid
 - Built and maintained multiple live event and competition websites simultaneously, including **Fanni Mobtaker, IEEE Smart Mobility, SSP Challenge, SeaPerch, UAE IoT and AI Challenge**, and others
 - Implemented **site security** hardening using **Wordfence** — **configuring firewall rules, blocking malicious IPs**, and responding to live bot attacks and unauthorized access attempts
 - Wrote custom JavaScript for dynamic content rendering, form behaviors, and client-side validation integrated into WordPress pages
 - Developed custom **judging systems** for innovation competitions, and display live leaderboards
- **Advanced Front-End Program at Elevate (JSB)** march 2025 - aug 2025
Elevate Tech Online
 - Collaborated in a **team of developers across three projects**: Rose App, an admin dashboard, and a fitness application
 - **Conducted** and received **code reviews** from senior developers, improving **code quality** and enforcing **clean code standards**
 - Managed **Git branches**, resolved **merge conflicts**, and followed **professional Git workflows**
 - Implemented **role-based access control (RBAC)** to manage user permissions across the application
 - Built a **reusable, configurable data table component** with dynamic styling, used **across multiple dashboards**
 - Applied **performance optimization** techniques including **pagination and lazy data fetching** — **loading only visible items on initial render** rather than the full dataset
 - Made informed decisions between React **Server Components and Client Components**, using **server actions and hooks** appropriately

TECHNICAL SKILLS

Languages: JavaScript (ES6+), HTML5, CSS3

Frameworks & Libraries: React.js, Next.js, Node.js, Express.js

Databases: MongoDB

Dev Tools: Git, GitHub, VS Code, REST APIs

Concepts: Server-Side Rendering (SSR), React Server Components, Custom WordPress Plugins, Access Control (RBAC), Performance Optimization, Responsive Design

Soft Skills: Problem Solving, Teamwork, Code Review, Adaptability
